ontology: BP protein folding in endoplasmic reticulumprotein folding positive regulation of cell-cell adhesion cell chemotaxis leukocyte migration positive regulation of cell adhesionleukocyte chemotaxis positive regulation of T cell activation response to organophosphorus lymphocyte migration-ATF6-mediated unfolded protein response lymphocyte chemotaxis positive regulation of leukocyte cell-cell adhesion cellular response to organic cyclic compoundregulation of myoblast fusionregulation of tumor necrosis factor productionresponse to purine-containing compound positive regulation of interleukin-4 production inflammatory response tumor necrosis factor production regulation of tumor necrosis factor superfamily cytokine production maintenance of location positive regulation of cytokine production regulation of leukocyte migrationmyeloid leukocyte migrationtumor necrosis factor superfamily cytokine production cellular response to drugpositive regulation of T-helper cell differentiation regulation of syncytium formation by plasma membrane fusionpeptide secretion positive regulation of endothelial cell proliferationregulation of myotube differentiation dendritic cell chemotaxis regulation of interleukin-4 production chemotaxis taxis regulation of actin polymerization or depolymerization regulation of actin filament lengthpositive regulation of lymphocyte activationcellular response to cAMP dendritic cell migration positive regulation of CD4-positive, alpha-beta T cell differentiation regulation of cell-cell adhesion cellular response to biotic stimulus interleukin-4 productionresponse to cAMP lymphocyte activation-B cell activation positive regulation of cell activation myeloid leukocyte activation B cell receptor signaling pathway positive regulation of leukocyte activation regulation of B cell activation neutrophil chemotaxis regulation of lymphocyte proliferationregulation of mononuclear cell proliferation regulation of B cell proliferation positive regulation of B cell activation myeloid cell activation involved in immune response activation of immune response regulation of leukocyte proliferationregulation of leukocyte activationregulation of lymphocyte activationimmune response-regulating signaling pathway immune response-activating signal transductionregulation of cell activation neutrophil migration B cell differentiation lymphocyte proliferationmononuclear cell proliferationleukocyte degranulation-B cell proliferation T cell activation granulocyte chemotaxis positive regulation of leukocyte migration leukocyte proliferation positive regulation of myeloid leukocyte mediated immunity positive regulation of lymphocyte proliferationpositive regulation of mononuclear cell proliferationimmune response-regulating cell surface receptor signaling pathwaypositive regulation of B cell proliferationimmune response-activating cell surface receptor signaling pathway myeloid leukocyte mediated immunity positive regulation of leukocyte proliferation leukocyte cell-cell adhesionregulation of chemotaxis granulocyte migrationpositive regulation of GTPase activity macrophage activationregulation of B cell differentiation positive regulation of B cell differentiation granulocyte activation antigen receptor-mediated signaling pathway GeneRatio synaptic vesicle localization synaptic vesicle cycle 0.050 0.075 pallium development 0.100 positive regulation of response to external stimulus p.adjust leukocyte differentiation regulation of leukocyte cell-cell adhesion 0.03 regulation of neutrophil chemotaxis 0.02 neutrophil activation involved in immune response-0.01 neutrophil degranulationneutrophil activationregulation of bone resorptionregulation of neutrophil migrationneutrophil mediated immunity regulation of T cell activation regulation of leukocyte chemotaxis adaptive immune responselymphocyte differentiation positive regulation of chemotaxis synaptic vesicle transportestablishment of synaptic vesicle localization vesicle-mediated transport in synapse exocytic process telencephalon development regulation of cytokine biosynthetic process regulation of anatomical structure sizeregulation of leukocyte mediated cytotoxicity dendrite extension positive regulation of leukocyte chemotaxis positive regulation of T cell proliferation monovalent inorganic cation transport vesicle localization positive regulation of leukocyte mediated immunity cellular response to molecule of bacterial originpositive regulation of myeloid cell differentiationlimbic system developmenticosanoid biosynthetic process regulation of GTPase activity regulation of leukocyte mediated immunity hippocampus developmentregulation of vesicle-mediated transportregulation of myeloid leukocyte mediated immunity regulation of cell killing regulation of bone remodeling positive regulation of granulocyte chemotaxis positive regulation of neutrophil chemotaxis regulation of dendrite extension cytokine biosynthetic process cytokine metabolic process regulation of cellular component sizeestablishment of organelle localizationpotassium ion transportpositive regulation of cytokine biosynthetic process regulation of granulocyte chemotaxis synaptic vesicle exocytosis phagocytosis-Fc-epsilon receptor signaling pathway innate immune response-activating signal transductionmacrophage activation involved in immune response axonal transport of mitochondrionregulation of interleukin-6 biosynthetic process calcium ion regulated exocytosis T cell activation involved in immune response positive regulation of neutrophil migrationneurotransmitter secretion signal release from synapse polyol metabolic process positive regulation of interferon-gamma productionpositive regulation of translation glial cell activation Fc receptor signaling pathway interleukin-6 biosynthetic process regulation of cytokine productionregulation of innate immune responsepositive regulation of immune effector process cellular response to lipopolysaccharide presynaptic process involved in chemical synaptic transmission regulation of neuron projection development regulation of axonogenesis positive regulation of bone resorptionpositive regulation of bone remodelingsynaptic vesicle recycling positive regulation of hemopoiesis B cell homeostasis inositol phosphate metabolic process clathrin-dependent endocytosis lymphocyte activation involved in immune response T cell proliferationacid secretionactivation of innate immune response forebrain development cerebral cortex development regulation of T cell proliferation cerebral cortex cell migration bone resorption ammonium transportinterleukin-6 productionpositive regulation of innate immune response calcium-mediated signaling receptor-mediated endocytosis purinergic nucleotide receptor signaling pathway regulation of immune effector process H_c D_c (136)(294)
